PHYSIOLOGICAL REGULATING MEDICINE

## BEAUTY MEDICINE

Aesthetic Medicine is one of the fields where PHYSIOLOGICAL REGULATING MEDICINE expresses itself best. What can be considered as simple aesthetic factors (cellulite, adipose depositions, skin sagging, etc.) is actually a consequence of a **general imbalance** involving the body's terrain systems.

Only by recovering the physiological structure of the fat tissue, restoring the endocrine balance, detoxifying the extra cellular matrix, and promoting a correct metabolic functioning, can we expect to stimulate and repair the tissues' tonicity, to eradicate wrinkles, adipose tissue, skin sagging, cellulitis, and reduced vascularity.

The composition of the remedies of PHYSIOLOGICAL REGULATING MEDICINE takes into account the etiopathogenesis evolution of aesthetic degenerative conditions and then employs all the different components required to restore vitality and youthful appearance. The remedies of Aesthetic Medicine, including vials used in mesotherapy, have long-lasting results, without the negative side effects or contraindications.

At present, PHYSIOLOGICAL REGULATING MEDICINE is opening a new frontier in the field of Aesthetic Medicine. The requirements of millions of patients looking for real, long-lasting and riskless results can now be satisfied.
